

# Wenyu Chiou

*Ph.D. Candidate · Civil & Environmental Engineering / Complex Adaptive Water Systems (CAWS) Lab, Lehigh University*

*My research develops governed LLM-driven agent and multi-agent systems for coupled human–water modeling — bridging empirical behavioral data, interpretable rule-based simulation, and large language models to study human–flood interaction and decision-making under risk.*

## § 01 Education

### **Ph.D., Civil & Environmental Engineering**, Lehigh University

Aug 2024 – present · expected 2028

Complex Adaptive Water Systems (CAWS) Lab · Advisor: Prof. Y.C. Ethan Yang · Center for Catastrophe Modeling and Resilience (CMR)

**Dissertation:** *Advancing Coupled Human-Flood Modeling: From Empirical Foundations to LLM-Driven Multi-Agent Simulation*

Research: LLM-driven coupled ABM–catastrophe model framework for household flood adaptation; governed agent framework (WAGF) validating LLM agents against behavioral theory before they act; multi-agent systems for quantitative risk assessment.

### **M.S., Hydrological and Oceanic Sciences**, National Central University (NCU), Taiwan

Sep 2021 – Jun 2023

Surface Hydrology Group · Institute of Hydrological and Oceanic Sciences (IHOS) · GPA 4.3/4.3 · Dean's Award, College of Earth Sciences (Jun 2023). Thesis: groundwater flow characteristics of the Taoyuan coastal zone.

### **B.S., Earth Sciences**, National Central University (NCU), Taiwan

Sep 2017 – Jun 2021

GPA 3.9/4.3 · Best Undergraduate Student Project and Report (Nov 2020).

## § 02 Research Experience

### **Ph.D. Candidate** — Complex Adaptive Water Systems (CAWS) Lab, Lehigh University

Aug 2024 – present

- Co-authored the *Water Resources Research* (2026) article substituting large language models as the behavioral engine of a human–water simulation — published; second author of two.
- Building a governed LLM-agent framework (WAGF) with validation rules, execution control, and audit logs — agent decisions are checked against physical constraints and behavioral theory before simulation state updates; research software in preparation for release.
- Built a 52,141-household coupled agent-based × catastrophe flood model (27 census tracts, 2011–2023) with NFIP premium, payout, and deductible mechanics; simulated payouts validated against OpenFEMA insurance-claims data over 50 Monte Carlo runs (median + IQR).
- Designed and fielded a 937-household flood-adaptation survey (Passaic River Basin, NJ) and a survey-to-agent parameterization pipeline (structural equation modeling → Bayesian calibration) that turns empirical data into calibrated agent parameters.

### **Research Assistant** — Surface Hydrology Group, IHOS, National Central University

2023 – 2024

- 2D/3D groundwater numerical modeling and calibration for the Taoyuan coastal zone (HydroGeoChem); evaluated nature-based solutions for groundwater and watershed management.

### **Summer Research Intern** — National Science and Technology Center for Disaster

Summer 2022

Reduction (NCDR), Taiwan

- Processed IPCC AR6 downscaled climate-model ensembles for Taiwan; automated multi-model comparison pipelines (Python, MATLAB).

▷ Stable-isotope hydrology ( $\delta\text{D}/\delta^{18}\text{O}$ ), Feitsui Reservoir.
