

Wenyu Chiou

Ph.D. Candidate · Civil & Environmental Engineering | Complex Adaptive Water Systems (CAWS) Lab, Lehigh University

My research develops governed LLM-driven agent and multi-agent systems for coupled human–water modeling — bridging empirical behavioral data, interpretable rule-based simulation, and large language models to study human–flood interaction and decision-making under risk.

§ 01 Education

Ph.D., Civil & Environmental Engineering, Lehigh University

Aug 2024 – present · expected 2028

Complex Adaptive Water Systems (CAWS) Lab · Advisor: Prof. Y.C. Ethan Yang · Center for Catastrophe Modeling and Resilience (CMR)

Dissertation: *Advancing Coupled Human-Flood Modeling: From Empirical Foundations to LLM-Driven Multi-Agent Simulation*

Research: LLM-driven coupled ABM–catastrophe model framework for household flood adaptation; Water Agent Governance Framework (WAGF) checking LLM-agent decisions against physical, financial, and behavioral-theory constraints before they act; multi-agent systems for quantitative risk assessment.

M.S., Hydrological and Oceanic Sciences, National Central University (NCU), Taiwan

Sep 2021 – Jun 2023

Surface Hydrology Group · Institute of Hydrological and Oceanic Sciences (IHOS) · GPA 4.3/4.3 · Dean's Award, College of Earth Sciences (Jun 2023). Thesis: groundwater flow characteristics of the Taoyuan coastal zone.

B.S., Earth Sciences, National Central University (NCU), Taiwan

Sep 2017 – Jun 2021

GPA 3.9/4.3 · Best Undergraduate Student Project and Report (Nov 2020).

§ 02 Research Experience

Ph.D. Candidate — Complex Adaptive Water Systems (CAWS) Lab, Lehigh University

Aug 2024 – present

- Co-authored the *Water Resources Research* (2026) article substituting large language models as the behavioral engine of a human–water simulation — published; second author of two.
- Building the **Water Agent Governance Framework (WAGF)** with validation rules, execution control, and audit logs — agent decisions are checked against physical, financial, and behavioral-theory constraints before simulation-state updates; research software in preparation for release.
- Built a 52,141-household coupled agent-based × catastrophe flood model (27 census tracts, 2011–2023) with NFIP premium, payout, and deductible mechanics to assess physical flood damage, insurance payouts, and household out-of-pocket financial exposure; behavior calibrated through structural equation modeling and Bayesian methods.
- Designed and fielded a 937-household flood-adaptation survey (Passaic River Basin, NJ) and a survey-to-agent parameterization pipeline (structural equation modeling → Bayesian calibration) that turns empirical data into calibrated agent parameters.

Research Assistant — Surface Hydrology Group, IHOS, National Central University

2023 – 2024

- 2D/3D groundwater numerical modeling and calibration for the Taoyuan coastal zone (HydroGeoChem); evaluated nature-based solutions for groundwater and watershed management.

Summer Research Intern — National Science and Technology Center for Disaster Reduction (NCDR), Taiwan

Summer 2022

- Processed IPCC AR6 downscaled climate-model ensembles for Taiwan; automated multi-model comparison pipelines (Python, MATLAB).

Undergraduate Research Intern — Institute of Earth Sciences, Academia Sinica

Jul – Aug 2020

- Stable-isotope hydrology ($\delta D/\delta^{18}O$), Feitsui Reservoir.

- Human–water interaction
- Decision-making under risk
- Structural equation modeling

AGENT SYSTEMS
LLM agents · multi-agent systems · structured prompting · validation rules · audit logs · simulation coupling
PROGRAMMING
Python · TypeScript · R · MATLAB · C++
SOFTWARE & TOOLS
Git · Jupyter · SPSS · AMOS · ArcGIS Pro
AI TOOLING
Claude Code · Codex CLI · Cursor · Ollama · MCP · plugin/skill development

research-hub AI-operable research workspace · PyPI v1.1.1 · Maintained open-source tool An AI-operable research workspace for Zotero, Obsidian, and NotebookLM — search, ingest, and sync papers through one CLI, MCP server, and REST API. Listed in Awesome MCP Servers.	WAGE — Water Agent Governance Framework LLM-agent simulation governance · In preparation for release A governed LLM-agent framework for human–water simulation that checks agent decisions against physical, financial, and behavioral-theory constraints before simulation-state updates.
FLOODABM Coupled ABM × CAT model · Research prototype, archived A large-scale simulation (52,141 households) that quantifies human–flood interaction and insurance outcomes; Zenodo-archived companion code with CITATION.cff.	agent-collab-skills Multi-agent orchestration · Maintained open-source tool Multi-agent orchestration — task splitting, output reconciliation, adversarial debate, shared memory, and a pre-merge acceptance gate.
codex-delegate AI research workflow tooling · Maintained open-source tool Agent-delegation wrappers that verify change from git state, not the delegate’s own report; a regression test pins a real upstream failure. CI on Ubuntu and Windows.	ai-research-skills Research workflow · Maintained open-source tool A research workflow for identifying gaps, finding and synthesizing literature, designing studies, and drafting papers — supporting the full research lifecycle from idea assessment to manuscript development.
fable-method-harness Portable AI-agent operating harness · Maintained open-source tool Cost/model routing with an audit trail for AI-assisted work — matches strong-model quality at about 2.5× lower cost in a pre-registered benchmark.	

Graduate Student Committee Member — Lehigh University, Dept. of Civil & Environmental Engineering	2025 – present
